

**Job Opening:** Research Scientist

Theraclone Sciences is a private research and development biotech company located in Seattle, WA ([www.theraclone-sciences.com](http://www.theraclone-sciences.com)) focused on discovering human monoclonal antibodies for therapeutic or vaccine development using the state-of-the-art I-STAR technology that differentiates from other technologies by its success in isolating rare antibodies from the B cell repertoire.

**Job Description:**

We are seeking a Ph.D. scientist to design and execute research in isolating and characterizing monoclonal antibodies naturally. The successful candidate will actively participate in R&D projects as team member and will have the opportunity to lead discovery projects and supervise research staff. He/she should have extensive research experience and working knowledge in the areas of monoclonal antibodies, immune response, and an area of biology such as cancer and infectious disease. The candidate will have a proven track record of the following:

- Demonstrated ability to design experiments and to deliver results in a fast paced, team-oriented environment
- Strong and exquisite hands-on expertise in the development, implementation and validation of a wide variety of plate and cell-based assays. Experience with automated lab equipment to develop and execute medium-to-high throughput and low-volume microtiter plate assays.
- Previous experience in the design of in vitro and in vivo efficacy studies is highly desirable
- Candidates who have previously worked in the biotech/pharma industry will be preferred

**Qualification Requirements:**

- Ph.D. in immunology, cancer biology, virology, microbiology or a similar discipline with over 3 years of post-doctoral experience. Alternatively, M.Sc. in similar disciplines with over 10 years of post-master discovery research experience.
- Good track record of publications in relevant research areas.
- Broad in-depth knowledge in the area of expertise to support experimental design.
- Self-motivated, proactive and collaborative team member.
- High proficiency in detailed reporting using Excel and PowerPoint as well as strong oral and writing skills.

Theraclone offers a team-oriented, stimulating work environment. Competitive compensation, benefits and stock options are offered. Please email your resume with cover letter to [careers@theraclone-sciences.com](mailto:careers@theraclone-sciences.com)
